- Belgium (wfh), Remote

STACK

Angular, Typescript, HTML, CSS, SASS, Bootstrap, Angular CLI, Angular Material, RxJS, NgRx Store, Transloco, AG Grid, d3

Git, Docker

Currently not used: Java, Spring Boot, ElasticSearch

LANGUAGES

English	fluent
Russian	mother tongue
Dutch	intermediate

INTERESTS

Currently learning development in blockchain. Interested in learning React or Vue. Great at karaoke.

EXPERIENCE

Feb 2022 – present — **CluePoints** — Frontend Engineer

Working on a Risk-Based Quality Management web application for clinical trials. My responsibilities include:

- Maintaining and refactoring existing code, upgrading Angular and dependant libraries versions, bringing the setup closer to the Angular standards
- Creating new features and writing unit tests and documentation when needed
- Comprehensive code reviews and collaboration within my squad
- Actively participating in discussions on the frontend technical debt and improvements

Feb 2019 – June 2021 — **Cognizone** — Junior Developer (Full Stack)

At Cognizone, I developed interactive web applications for jurisdictional systems of Luxembourg using Java, Angular, ElasticSearch and semantic technologies. I was involved in the following projects:

- Legilux
  Implemented an advanced search tool, including filtering, suggestions, search on contents, using Angular and ElasticSearch. Proposed and implemented a solution for indexing of long texts. Worked on SEO. Supervised a junior developer.

- Legipro, Directives
  Wrote a Spring configuration to substitute multiple similar CRUD controllers and services. Worked with data visualisation library d3. Proposed and set up a mapping to help with complex authentication logic.

EDUCATION

2015 - 2019 — KU Leuven — Computer Science
For the Bachelor's thesis I worked in a team to develop a 3D flight simulator in Java.
